What's Eating You?
By
James R. Overman, N.D.

You believe in herbs, you’ve seen them help lots of people. You know minerals are important, you’ve tried them all. You’ve taken vitamins all your life. Your mother even took them before you were born! Why are you still sick? Many people get well taking supplements, you only slowly get worse. You have tried iridology, reflexology, chiropractic, and half a dozen other modalities with weird oriental names. Why are you still getting sicker every month? You read all the supplement ads, at least half a dozen a day, that come to your mailbox. Other people get marvelous cures of big time chronic disease taking supplements that don’t muscle test to be good for anyone. You're sicker yet!

Perhaps you have parasites. But you say I took a parasite cleanse last month and it didn’t help. Did you know that parasite cleanses only kill parasites in the intestinal tract? What about those in you brain? Your heart? Your joints? Parasites can be in any organ. The worst diseases and parasitic problems are not the ones caused by parasites in the intestines, but those caused by the invasion of organs and tissues. Parasites literally invade and damage or destroy every organ and tissue in the body.

Surprise! Your best friend whether human or canine may have given you an introduction to the suffering caused by parasitic infection. Get this picture. Your dainty poodle passes roundworm eggs in her stool. She licks herself and spreads the eggs all over her coat. She jumps up on your lap and gives you a sloppy kiss. You pet her well groomed coat. The eggs are now on your hands, your clothing, the carpet and the upholstered furniture. You forget to wash your hands well before eating your sandwich. The eggs are now on your sandwich. As you chew your sandwich, the eggs are too small to be damaged by your teeth. You swallow them. Your digestion hasn't been good lately. There is not enough hydrochloric acid in your stomach to kill the eggs. They go through unscathed into your small intestine or colon where they bore holes through the intestine wall. Next they hitch a ride to any organ in the moving stream of your flowing blood. They bore into your heart, brain, kidney or any other organ and riddle it with tunnels like those in a wormy apple or they build their little houses and take up permanent residence at 110 Kidney Street. There they soak up the nutrients your blood brings for the tissues and dump their sewage to toxify the fluid that bathes the cells that are trying desperately to serve you and keep you healthy. Their burrows have made holes in the nephrons so your kidneys are leaking proteins and other larger molecules into your urine. Other nephrons get stopped up with debris causing swelling, toxicity and poor electrolyte balance.

You can get parasites from being bitten by ticks, mosquitoes, flies and other insects. You can eat them or their eggs and spores or cysts in poorly cooked meat, poorly washed fruits and vegetables or in food handled by people with contaminated hands. What about that meat cutting board and the dish cloth used to wipe up raw meat juices? Did they
spread parasite eggs to your dishes and counter or table top? You can get them by contact with dogs, cats, pigs, horses, chickens and people as well as many other living creatures. Some you can get by walking barefoot. Some from wearing other peoples clothing. Some from contaminated drinking water. Some from contaminated air from sneezing, recirculated air or running vacuum cleaners.

Maybe you killed parasites in one stage of their development but didn’t kill the eggs, or the cysts, or the juvenile forms. It would help to understand their life cycle. Then you could kill them all. Unless you find and kill every stage in the life cycle of a parasite, they will continue to thrive and evade your attempts at control.

Perhaps you even killed all your parasites, but didn’t know how to dissolve their cysts. These empty apartment complexes still remain in you tissue weakening it and preventing healing and restoration of proper function. Left over cysts of dead parasites do not allow proper healing and may cause severe loss of function and pain.

Did you know that there are hundreds of species of parasites in several groups that infect humans. These include flukes, round worms, tongue worms, tapeworms, pinworms, protozoa, fungi, yeasts, bacteria, mycoplasmas and nanobacteria. These range in size from a few billionths of a meter (nanobacteria) to over 30 feet long (fish tapeworm). Each has its own life cycle, tissues it likes to traumatize, method of reproduction, problems it causes, methods of infecting new hosts and methods needed for its control and elimination from the body.

Wouldn’t it be helpful know what diseases are caused by what parasite? Wouldn’t it be great to know your enemy so you could defeat him? Did you know that over 80% of people with chronic disease have parasites and that it’s usually the parasites that have caused their problems?

Did you know that parasites cause depression, schizophrenia, migraines, deafness, blindness, loss of bowel control, loss of voice, chronic coughing, asthma, arthritis, fibromyalgia, lupus, retarded growth, heart disease, hypothyroidism, hyperthyroidism, and loss of bone density. Would you like to solve a fertility problem? Many reproductive problems are caused by parasites including precocious puberty, PMS, irregular cycles, absence of cycles, endometriosis, molar pregnancies, low sperm counts, poor sperm motility and swollen prostates. What about incontinence, bed wetting, ferocious appetite accompanied by weight loss, rectal itching, teeth grinding, skin rashes, leg ulcers and diarrhea? They too are usually caused by parasites! Horrible diseases like cancer, diabetes, AIDS, ADD, kidney failure, multiple sclerosis, muscular dystrophy and epilepsy are also caused by parasites. If you don’t kill the parasites you can only treat the symptoms and not expect to recover from these horrible diseases.

Thousands of people who have had horrible diseases for ten, twenty even fifty years have finally gotten relief and healing after all parasites were eliminated along with all cysts from their tissues and the proper healing herbs were taken to restore proper function to their war ravaged organs. Many have been given up as hopeless by the established
medical community after draining them dry of their money, strength and worst of all their hope! Wouldn’t you like to add your testimony of wondrous healing to theirs?

Would you like to understand all the tools for eliminating parasites and how to use them? Would you like to be able to determine what kinds of parasites are present, how many are there just by doing muscle testing? Would you like to be able to know when they are no longer a problem? Do you know how to keep them from coming back? Do you know how to repair all the damage they have done to your tissues? Would you like to keep your family and pets parasite free? If the answer is yes, you need to read Dr. Overman’s book, *Overcoming Parasites Naturally* or attend one of his seminars.
